AOC launches the G1 series-- a trio of "aggressively curved" gaming monitors in sizes ranging from 23.6- to 27- and 31.5-inch all with FHD, VA panels, FreeSync, 144Hz refresh and wide viewing angles.

Dubbed the C24G1, C27G1 and C32G1, the three monitors feature 1500R (C24G1) to 1800R (C27G1, C32G1) curvatures in a three-sided borderless design in black with red accents. All are compatible with AMD FreeSync, with syncing up to 144Hz, and feature a fast response time of 1ms to minimise motion blur. In addition, AOC promises low input lag to ensure actions from input devices translate into visual feedback without latency caused by internal monitor processing.

Another feature in the G1 monitors is AOC Game Colour-- image curve options designed for specific gaming scenarios. AOC includes pre-defined FPS, Racing and RTS game modes, and customers can add their own. Another gaming enhancement is a crosshair mode dubbed AOC Dial Point. Making viewing easier are low blue light and flicker-free technologies.

Connectivity options include x2 HDMI, DisplayPort and VGA ports, together with a headphone jack. The C24G1 and C27G1 feature an ergonomic stand with 130mm height adjustment and -35/+35-degree swivel range. The bigger C32G1 sits on a similar stand, if one that is only tilt-adjustable.

The C24G1 and C27G1 ship from July 2018, with the C32G1 to follow on August.
