

Asus Intros VG245Q Gaming Monitor

Written by Marco Attard
06 April 2017

Asus announces a monitor aimed specifically at console gaming-- the VG245Q, a 24-inch 1920 x 1080 resolution display featuring a TN panel with support for refresh rates of 40 to 75Hz.

The monitor offers 250 nits brightness, 170/160-degree viewing angles, 100000000:1 smart contrast ration, 16.7 million display colours, 1ms response time (grey-to-grey) and TUV Rheinland-certified flicker-free and low blue light technology. It also supports AMD Free-Sync technology, allowing one to sync the monitor with graphics cards to reduce image tearing and lag.

An adjustable stand provides 90-degree swivel, +33- to -5-degree tilt and 0-130mm height adjustment. Connectivity comes through x2 HDMI, DisplayPort and D-Sub, together with an audio-out jack and headphone jack. Also included is a pair of built-in speakers.
