

WHDI Streaming Through a Stick

Written by Marco Attard
12 October 2010

Amimon reveals its WHDI Stick pair, a small HD transmitter and a receiver. Once the transmitter is plugged into the PC, it transmits to either receiver (plugged into TV's HDMI port) or to any WHDI enabled set.

Amimon says the device is the smallest WHDI compliant product to date.

WHDI security and HDCP 2.0 copy protection allow users to stream copy-protected content from their PCs, in uncompressed 1080p/60Hz HD with less than 1 millisecond latency.

The stick will hit the market in 2011.
