Lenovo refreshes the ThinkCentre desktop and all-in-one PC range with Ivy Bridge processors-- and models including the "Tiny" M92p and M72e desktops.

The M92p and M72e are a bit smaller than a Mac Mini, measuring 18 x 18 x 3.5cm. The diminutive cases (a bit thicker than a golf ball) fit x5 USB ports (with x3 USB 3.0 ports in the M92p) carry 3rd generation Intel Core processors and either HDD or SSD storage.

The Lenovo all-in-one desktop range gets the ThinkCentre Edge M92z-- the thinnest Lenovo commercial all-in-one yet, being only 5cm thick. An Infinity Glass front panel covers a 21.5" IPS LED display, and processor options include up to Core i7 chips. Intel Wireless Display (WiDi) technology allows one to connect the M92z to HDTVs or other displays.

Aiming at small business owners, Lenovo includes remote management tools with Lenovo Solution Center powered by Intel Small Business Advantage.

Customers wanting a more traditional PC also have Lenovo options-- the budget ThinkCentre Edge 72 or the higher-end ThinkCentre M82, both with optional 23" ThinkVision LT2323z displays.
