Customers longing for a tiny PC the size of a USB stick (such as the FXI Cotton Candy or Raspberry Pi) now have the Rikomagic MK802 Android-powered option.

It carries an AllWinner A10 1.5GHz CPU and a Mali 400 GPU supporting 1080p video-out through HDMI port. It uses Android 4.0, but users can also install ARM-compatible Linux versions.

Weighing less than 200g, the MK802 also has 4GB of internal flash storage, a microSD card slot and x2 USB ports (full-size and micro). Connectivity comes via wifi.

It currently appears to be available only through Chinese resellers for all of \$74.
