---

The Arctic MC001 PC gets an update-- the MC001-XBMC, a Home Theatre PC (HTPC) created in partnership with XBMC developers OpenELEC.

As a result the MC001-XBMC carries the latest version of the XBMC platform, 12.0 aka "Frodo".

It carries a dual-core 1.8GHz Intel Atom CPU, ATI Radeon HD 5430 graphics, 2GB RAM, 1TB HDD and supports AirPlay and DLNA streaming. Connectivity includes wifi and ethernet together with VGA, SPDIF, HDMI, USB and 3.5mm audio.

Control comes through either bundled IR remote or Android/iOS device apps, and OpenELEC 3.0 allows TV tuner and PVR functionality. A variety of add-ons also extend features to internet radio, online video and music-on-demand services.
