# Shuttle Expands AIO Range

Written by Marco Attard

14 March 2013

Shuttle shows off additions to its All-in-One (AIO) PC range at CeBIT 2013-- including the Shuttle AIO Barebone X70S, a 18.5-inch version of its 15.6-inch machines.

The X70S is the first Shuttle AIO with an LGA1155 socket allowing it to carry conventional Intel desktop processors (Intel Core i3/i5/i7) with up to 65W TDP.

The 5.7 x 46.8 x 36.4cm chassis includes x2 SO-DIMM slots (for a total of 16GB of DDR3 RAM), space for a 2.5-inch HDD or SSD, mini-PCIe slot, x2 USB 3.0 and x6 USB 2.0 ports, integrated card reader, HDMI port, wifi, webcam, microphone and stereo speakers.

Meanwhile x2 gigabit ethernet cards, x3 serial interfaces (COM) and a parallel interface (LPT) make the X70S ideal not only as a desktop PC, but also as a digital signage platform through the replacement of the pedestal stand (included) with a VESA wall mount, monitor arm or floor stand.
