HP launches the Slate 21 at the Beijing World Tour event-- a 21.5-inch All-in-One (AIO) Android 4.2.2 PC customers can use as either a desktop or an oversized tablet.

The device features an IPS touchscreen, DTS sound technology, 8GB storage, x3 USB ports and a kickstand allowing multiple standing modes. Powering all is an Nvidia Tegra 4 quad-core processor.

HP promises the AIO will also include entertainment and productivity Android apps, together with keyboard and mouse support.

The Slate 21 should be available in the US from September 2013, so expect a European launch at the thereabouts.
