

The MSI Convertible AIO PC

Written by Marco Attard
12 March 2015

MSI presents what it claims is the first "convertible" All-in-One (AIO) PC-- the AP16 Flex, a 15.6-inch touchscreen device customers can use in either standing, hanging or flat modes.

A rotating kickstand can either act as an upright stand or allow attachment to a wall or cabinet for use as a large multimedia device. One can also lay the AP16 Flex flat on its back.

Inside the fanless chassis are a 10W quad-core Intel Celeron J1900 CPU, Intel HD graphics, up to 8GB DDR3L RAM and either 64GB flash storage or a 500GB HDD. Connectivity comes through 3 USB ports, 1 LAN port, 802.11b/g/n wifi and Bluetooth (optional).

Another optional involves voice control-- MSI includes Star software for users wanting to wake the PC, open email and browser, listen to music or turn the PC to sleep mode using only their voice.
