Lenovo follows companies such as Intel and Asus to present an HDMI stick-style micro PC-- the ideacentre Stick 300, featuring an Intel Atom Z3735F CPU, 2GB memory and 32GB of storage inside casing 15mm thin.

It is Windows 8.1 powered, but Lenovo says customers will get a free upgrade to Windows 10 once the OS launches on July. Connectivity comes through wifi and Bluetooth, while ports include x1 HDMI, x1 micro USB 2.0 and SD card reader.

“We’ve looked at the computing needs of travelers, business people and families, and realized that a truly portable and affordable solution would be a significant benefit to users of all kinds,” the company says. “Our goal with the ideacentre Stick 300 is to give those users a sense of freedom and enhanced mobility, while packing a serious punch in a small device.”

The ideacentre Stick 300 hits the market from July 2015.
