

Glacier RTX 2080 Water Blocks From Phanteks

Written by Alice Marshall
23 January 2019

Dutch PC component maker Phanteks presents a pair of Glacier water blocks for the GeForce RTX 2080/Ti graphics card range-- the Phanteks Glacier G2080Ti Xtreme and the Glacier G2080Ti Strix.

The Glacier G2080Ti Xtreme is designed to fit Gigabyte RTX 2080/2080Ti Aorus Xtreme graphics cards, while the Glacier G2080Ti Strix is for use with Asus RTX 2080/2080Ti Strix cards. Both offer a minimalist design covering the entirety of the PCB, with a redesigned copper cold plate and optimised high-flow liquid routing design keeping the GPU, RAM and VRAM sections cool.

The water blocks come with anodised or chrome-plated aluminium cover plates (aka "Satin Black" or "Mirror Chrome"), polished acrylic surfaces and a nickel-plated copper base. Integrated RGB lighting is also included, what with the two products being ultimately aimed at the gamer market.

Phanteks says the two water blocks should start shipping by end January 2018.
