The Asus TUF Gaming range now includes graphics cards-- specifically the TUF-RTX2060-6G-Gaming (aka the Asus TUF GeForce RTX 2060 6GB GDDR6) or the TUF-RTX2060-O6G-Gaming (aka Asus TUF GeForce RTX 2060 6GB GDDR6 OC Edition).

As the name might suggest, TUF products are designed with durability in mind. As such, they lack the usual RGB lighting in favour of more militaristic stylings, as well as actual toughs in the shape of IP5X-rated dust resistance and a "solid backplate." Asus the cards go through 144 hour validation program to ensure compatibility with the latest games, while "precision automated manufacturing" promises "a more reliable product."

The TUF graphics cards are 20.4cm long and 4.6cm thick, and are equipped with dual-ball bearing fans. The cards feature a choice of two boost clocks, together with the 1365MHz base clock. The TUF-RTX2060-6G-Gaming runs at either 1689MHz in Gaming mode or 1710MHz in OC mode, while the TUF-RTX2060-O6G-Gaming has a 1710MHz boost clock in Gaming Mode and 1740MHz boost clock in OC Mode. Both cards require a 500W PSU to run (via single 8-pin connector) and include x1 DVI-D, x2 HDMI 2.0b and x1 SP 1.4 outputs.

Asus is still to announce when the two TUF graphics cards will be available.
