MSI announces the GeForce RTX 2080 Ti Lightning 10th Anniversary Edition graphics card at Computex 2019-- a GeForce RTX 2080 Ti-based card built using a speciallly binned TU102 die.

The company says it listened to feedback to refine the PCB layout, component choices and "extreme" OC features, bringing the best in performance and cooling technology. The card carries 11GB of GDDR6 memory and offers a boost clock of 1575MHz, within a TRI-FROZR thermal design using three TORX Fans 3.0 with double ball bearings and a heatsink optimised for efficient heat dissipation. A full carbon backplate both strengthens the card and boost thermal conductivity via thick heatpipe and thermal pads. The card requires a 650W PSU, and includes x3 8-pin power connectors.

On the aesthetic side the card comes in a choice of platinum or pink shroud accents, and features what MSI dubs "Phantom of Lighting" to create different lighting effects around the cooling fans. A built-in OLED display provides means to either check on real-time graphics card stats or simply display personal animations, with customisation taking place via Dragon Center software.

MSI is still to announce when the GeForce RTX 2080 Ti Lightning 10th Anniversary Edition will be available.
