Chinese PC maker Colorful announces the iGame Sigma M500-- a line of pre-built desktop computers aimed at customers wanting a plug-and-play solution for both gaming and computing applications.

The Sigma M500 series comes in Basic, Advanced, Prime and Ultra configurations, with specs ranging from 8th to 9th gen Intel Core processors, Colorful GeForce graphics cards, DDR4 memory and SSD storage. All come in a chassis the company describes as "inspired by DIY-built gaming PCs" and claims offer performance, stability and high technical standards.

The case promises "great" thermals with minimum noise, thanks to wing-type air vents providing both ventilation and a muting effect. The chassis also includes symmetric front ports with lighting controls, a reset switch flanked by a pair of USB 3.0 and USB 2.0 ports and the front audio and mic jacks. The central power button serves as the centrepiece and offers a satisfying click.
