Phanteks promises to house the most powerful hardware in the most flexible configurations with the Enthoo Luxe 2, a full tower case offering all the high-end features of other Phanteks cases, such as the Enthoo Elite and Evolv X.

The Enthoo Luxe 2 supports SSi-EEB motherboards, extreme water cooling with dual 480 and dual 360 radiators installed simultaneously and extensive storage with up to x12 HDDs/x11 SSDs. It also features good looks, in anthracite gray or satin black with a minimalist front panel, tempered glass window and integrated RGB lighting (compatible with Asus, Gigabyte, MSI, ASRock and Razer lighting systems).

The company says the case can be used to build either a powerful gaming machine, professional workstation or even a dual-system setup using the optional Revolt X. Customers can also configure it with dual PSUs (Revolt Pro required) if they want to. Phanteks suggests a pair of system configurations, one with coolers reaching up to 195mm height, GPU up to 503mm long and a motherboard up to 340mm wide, the other with a 120mm cooler (no GPU), cooler up to 60mm (GPU in slot 1) and cooler up to 80mm (GPU in slot 2).

The Enthoo Luxe 2 should be available by end August 2019.
