SanDisk announces the Extreme SSD-- a 2.5" SSD carrying a 6GB/s SATA connection, ideal for customers looking to boost aging PCs.

The company claims the drive handles read speeds of 550MB/s and write speeds of to 520MB/s, with up to 83000 random write and 44000 random read IOPS. It will be available in x3 sizes-- 120, 240 and 480GB.

OEMs also have a SanDisk announcement with the X100 SSD, a SATA drive coming in either 2.5" (7mm or 9.5mm) or customised form factors.
