

SanDisk Intros Ultra II SSD

Written by Marco Attard
21 August 2014

SanDisk proposes an easy upgrade solution for customers wanting to improve on their PCs--the Ultra II SSD, with an enhanced SSD Dashboard providing insights on drive performance, security and firmware updates.

According to the company the Ultra II SSD features sequential read speeds of up to 550MB/s and write speeds of up to 500MB/s. Based on X3 NAND flash, the SSD features nCache 2.0 two-tiered caching architecture to optimize drive speeds and endurance.

It is also shock resistant, keeping data safe even in case of bumps or drops.

Meanwhile the SSD Dashboard software provides value-added features such as cloning (via Apricorn EZ GIG IV), Trend Micro Titanium Antivirus and the Absolute LoJack theft recovery solution.

"We live in an era where we expect to have information at our fingertips anytime, anywhere, with technology that keeps us connected to both our personal and work lives on devices that won't fail," the company says. "The new SanDisk Ultra II SSD, together with the improved SSD Dashboard, provides consumers with an easy, affordable way to ensure that their PC can keep pace with their increasingly connected, information-driven lifestyle."
