

Western Digital adds a first SSD option to the My Passport portable storage portfolio- the My Passport SSD promises transfer speeds of up to 515MB/s, making it the fastest in the line.

Designed for use with USB-C devices, the My Passport SSD features a USB-C port and ships a USB-C to USB-C cable and a USB-A adapter. The drive is palm-size and pretty tough, since WD says it withstands falls of up to 2m and 1500G of force.

"The WD brand is focused on delivering fresh, new personal storage devices that offer amazing performance in a beautiful, yet durable design," the company adds. "Our fastest portable drive yet, the My Passport SSD is a powerful solution for people who need to move content quickly and easily wherever life takes them."

The My Passport SSD is available on Q2 2017 in 256GB, 512GB and 1TB capacities.
