How are customers to deal with multiple types of USB port? Silicon Power might have a solution with the Mobile C50, a flash drive featuring 3 USB connectors, Type-A, Micro-B and Type-C.

The standard Type-A connector with one side up is found at one end. Users can lift up the Type-A connector to reveal the Micro-B connector for older phones and tablets. On the other end, hidden under an elastic black cap, is the Type-C connector for modern devices.

The Mobile C50 ships with a couple of free tools-- SP Widget for PCs and SP File Explorer for devices with Type-C ports and Android. Also available from Silicon Power is Recuva File Recovery for the retrieval of deleted files.

"Never lost for the right connection, it's easier than ever to share data between new-generation USB Type-C devices, any "traditional" USB PC or laptop, and Micro-B smartphones or tablets," the company says. "The compact drive is also a reliable companion."
