

The Biggest Integral Memory microSD Card

Written by Alice Marshall
25 January 2018

British flash specialist Integral Memory presents what it claims is the biggest microSD card yet--the 512GB microSDXC V10 UHS-I U1 card, ideal for customers demanding a "massive memory boost."

The card meets the Video Speed Class 10 (V10) standard for fast data transfers, meaning it has a minimum write speed of 10MB/s. Thus the card should be ideal for HD/4K video recording in digital cameras, action cams, drones and camcorders.

Data transfer speeds clock at 80MB/s, making it slower than the current 2nd largest microSD card, the SanDisk 400GB card.

The 512GB Integral Memory microSD card ships from February 2018.
