

Preserving Data For Longer

Written by Marco Attard

SanDisk launches the Memory Vault-- a ruggedised flash drive making part of the company's new long-term photo and video storage series.

It uses "Chronoclock" technology, a proprietary memory management solution incorporating "the key elements of advanced solid-state storage".

SanDisk says the Memory Vault preserves data for up to 100 years, after carrying out accelerated temperature cycling tests.

With a low-profile metallic body, the Memory Vault will be available in 8GB and 16GB models.
