

Integral Releases Fastest Memory Card

Written by Marco Attard
23 November 2011

Integral Memory says the UltimaPro SDHC card is the fastest yet from the company-- reaching transfer speeds of up to 45MB/s and continuous write speeds of over 10MB/s.

Such speeds makes them ideal for photographers and camera enthusiasts in order to capture high resolution images and HD video recording.

The cards feature a SDHC Class 10 chipset together with a Ultra High Speed 1 (UHS-I/UHS-1) controller, and are available in sizes of 8, 16 and 32GB.
