Kodak Intros Budget All-in-One Printer

Written by Marco Attard
23 May 2012

Kodak launches the ESP 3.2-- an entry-level all-in-one printer/scanner combo with a feature set ideal for mobile device users.

The package not only offers scanning, copying and printing, but also handles wireless printing tasks. It lacks an ethernet port, connecting to PCs via USB and wifi.

Wireless printing comes through Google Cloud Print, Kodak's email printing service and Pic Flick app (available on Blackberry, iOS and Android devices).

The printer also features a 2.4" LCD touchscreen (handling slight photo editing tasks), SD card slot and a USB port.
