

When Windows 7 is Hard to Swallow...

Written by Bob Snyder

Go on, Microsofties, stuff yourself with an "Amerikanbanzu."

Tokyo's Burger King sells a Windows 7 Whopper stacked with 7 beef patties (total 1.75 pounds or .8 kg.)

A promotion by Burger King Japan and Microsoft, the "super giant" burger measures 5.1" in diameter. The 7-layered **Windows 7 Whopper** costs--of course--777 yen (US\$ 8.49) for the first 30 customers; the regular price is US\$15.84 (1450 yen).

Harder-to-swallow: the rumour Apple is developing the Leopard Burger--a bigger, tastier, healthier burger. It would be more expensive but easier to digest.
