Android-powered devices show up everywhere-- including at ISE 2011, where Media Line CEO Addy van Someren speaks to CIT and rAVe Europe Web TV on his company's latest offerings.

First off is the company's 9.7" tablet-- using the same IPS panel as the iPad, it carries Android 2.2 and supports Flash 10.1. It has 2 cameras (2MP front-facing and 5MP back-facing), x2 USB ports and 1 HDMI-out connection.

The company will be selling the device to distributors at €299, and the company is currently looking for distribution deals throughout EMEA territories.

Van Someren says tablets are also opening a new enterprise-level market in sectors like restaurants-- where tablets are used by servers to keep track of anything from menus to orders.

Also shown is Media Line's Android TV box-- a STB running on Android 2.2 giving users a full web browsing experience through their TV sets.
