

Stamp-size SSD from SanDisk

Written by Bob Snyder
08 September 2010

SanDisk's new SSD, smaller than a postage stamp and weighing less than a Euro cent, comes in capacities from 4GB to 64GB. This iSSD is fast enough for use with advanced operating systems such as Windows 7 or Mac OS X

SanDisk aims this at mobile computing platforms such as tablets and ultra-thin netbooks.

The iSSD uses a serial ATA (SATA) interface in a small ball grid array (BGA) package that can be soldered onto any motherboard. It offers 160MB/sec sequential read and 100MB/sec sequential write speeds.
